1 Introduction

Your introduction goes here! Simply start writing your document and use the Recompile button to view the updated PDF preview. Examples of commonly used commands and features are listed below, to help you get started.

Once you're familiar with the editor, you can find various project settings in the Overleaf menu, accessed via the button in the very top left of the editor. To view tutorials, user guides, and further documentation, please visit our [help library](#), or head to our plans page to [choose your plan](#).

2 Scope & Vision

What is the background of the company for which you carried out this project?

Not applicable if the project was not conducted for a company. **Why would the company want this to be researched or developed?**

If not for a company: what is the motivation behind the bachelor project? **What is the problem statement?**

What is the company's intention?

If not for a company: how will the product be used in the long term (independently of a company)?

What is the scope of the project within this bachelor project?

What is the ultimate scope?

3 Software Requirements Specification

Who are the target groups of the tool to be developed?

What aspects must you consider for these target groups?

What are the needs of these target groups?

What form of requirements gathering did you use?

What are the functional requirements?

Which features/user stories did you design?

What are the non-functional requirements?

Which features/user stories belong to the MVP?

4 Preliminary Research

Preliminary Research **Are there any related problem statements?**

Are there already similar digital solutions or tools that address this?

Can existing digital solutions be (partially) reused?

What technology is required to develop the solution or your digital product?

Did you conduct a comparative study of suitable technologies?

Is there a justification for the technologies that were selected?

Which project tools did you use?

Project Support **Which development methodologies did you apply?**

Which project tools did you use?

4.1 Overview used Technologies

Which programming languages did you use?

Which programming languages did you test but ultimately not use in the final development?

5 Reflection

Part 6.1: General reflection

Were the project objectives achieved?

Which test framework or technique was chosen and why?
Which parts of the project were or were not tested, and why?
Was security considered in the project and how was it addressed?
Where do you see possible improvements in the project's security?
Where do you see improvements in general?
What do you consider the greatest added value of the project?
What are the next steps or future opportunities for the project?

Part 6.2: Personal reflection

If you were to do the project again, what would you approach differently?
What impact do you think the research or developed tool has on people (ethics/inclusion)?

What impact do you think the research or developed tool has on society (economy/policy/education)?

What impact do you think the research or developed tool has on the climate (energy/sustainability)?

What will stay with you most about the project?

Feedback What did you think overall about the integrated bachelor project and the distribution with the traineeship?

Do you have suggestions for improvement for the integrated bachelor project?

6 Appendices

Meeting minutes van vergaderingen

The backlog

The story mapping (with different releases)

Example mappings (if available or in another format)

Gherkin scenarios (if available)

Login credentials

Installation manual

User manual

7 How to add Citations and a References List

You can simply upload a `.bib` file containing your BibTeX entries, created with a tool such as JabRef. You can then cite entries from it, like this: [Gre93]. Just remember to specify a bibliography style, as well as the filename of the `.bib`. You can find a [video tutorial here](#) to learn more about BibTeX.

References
